

WebAsia Creative Services Platform

Enhanced Production Design & System Architecture Document

1. Executive Overview

WebAsia Creative Services Platform is a SaaS-based, subscription-driven creative services marketplace inspired by platforms like **Kimp.io**, but deeply aligned with **WebAsia IT Solutions (<https://webasia.in/>)** brand identity, service offerings, and Indian market needs.

The platform converts WebAsia from a traditional service website into a **full-fledged CRM + Creative Workflow System**, where:

- Users explore services on the public website
- Register & subscribe to plans
- Access a CRM-style dashboard
- Submit unlimited creative requests
- Track progress, revisions, messaging, and deliveries

This system connects **Clients → Admin/Managers → Designers → Affiliates** in a controlled, scalable, and production-ready workflow.

2. Business Model Alignment (WebAsia → SaaS)

Current WebAsia Website (Public Layer)

- Marketing website
- Service listings
- Pricing pages
- Lead generation

New Platform Layer (Logged-in CRM)

- Subscription-based creative delivery
- Credit/quota-based request handling
- Transparent workflow & SLA tracking
- Retention-focused recurring revenue

Goal: Turn WebAsia into a predictable **MRR-based Creative SaaS**.

3. High-Level User Journey

Step 1: Public Website

- User visits **webasia.in**
- Views services (Graphics, Video, Social Media, Web, Branding)
- Sees packages & examples
- Clicks **Get Started / Subscribe**

Step 2: Registration & Subscription

- Signup (Email / Google / LinkedIn)
- Choose subscription plan
- Complete payment
- Account activated

Step 3: CRM Dashboard (Main Screen)

- User lands on **Client CRM Panel**
- Active subscription details visible
- Remaining credits/requests shown
- "Create New Request" CTA

Step 4: Request → Design → Approval → Delivery

Client → Admin/Manager → Designer → Manager Approval → Client Review

 — Rework / Feedback Loop — 

4. User Roles & Responsibilities

Client

- Subscribe to plans
- Submit creative requests
- Upload references
- Chat with designer/manager
- Approve / request revisions
- Download final files

Designer

- View assigned tasks
- Access brand assets
- Upload design versions
- Respond to feedback
- Track deadlines

Manager / Admin Manager

- Assign requests to designers
- Review designer submissions
- Approve / reject work
- Handle SLA & priority
- Client escalation handling

Super Admin

- Full system control
- Pricing, plans, users

- Financials & reports
- Platform configuration

Affiliate

- Promote WebAsia
- Track referrals
- Earn commissions
- Request payouts

5. Subscription & Credit Logic (IMPORTANT)

Subscription-Based Access

Each plan provides: - **Active request limit** (queue-based) - **Monthly/weekly credits** - **Service-specific caps** (videos, websites)

Example Logic

Plan	Active Requests	Monthly Credits
Startup	1	5 graphics
Standard	2	28 graphics + 4 videos
Business	3	90 graphics + 4 YT videos

Client can queue unlimited requests, but **only limited active requests** are processed at a time.

When a request is marked **Completed** → credit reduces → next queued request auto-activates.

6. Request Lifecycle (End-to-End)

6.1 Client Side

- Select service type (Graphic / Video / Web)
- Fill smart request form
- Upload references
- Set priority (Normal / Urgent)

6.2 Admin / Manager Side

- Request enters **Unassigned Queue**
- Manager assigns to designer
- SLA deadline auto-calculated

6.3 Designer Side

- Designer views task in dashboard

- Works on design
- Uploads version (v1, v2, v3...)
- Marks as **Submitted for Review**

6.4 Approval Flow

- Manager reviews output
- Approves OR sends back for rework

6.5 Client Review

- Client notified
- Uses annotation + comments
- Approves OR requests revision

6.6 Completion

- Final files delivered
 - Request marked **Completed**
 - Credits deducted
 - Next request moves to active
-

7. CRM Panels (Detailed)

7.1 Client CRM Panel

- Dashboard overview
- Active requests
- Queue requests
- Completed downloads
- Credit usage meter
- Chat & notifications
- **Post-completion feedback & rating system**
- **Public testimonial consent toggle** (Allow WebAsia to display feedback on website)

7.2 Designer CRM Panel

- Assigned tasks
- Deadlines & SLA
- Brand asset access
- File version control
- Feedback messages

7.3 Manager CRM Panel

- Unassigned requests
- Designer workload view
- Approval queue
- SLA breach alerts
- Client escalation inbox

7.4 Admin Panel (SUPER CONTROL)

Admin has **FULL SYSTEM CONTROL**. Nothing is hardcoded.

Admin Capabilities

User & Role Management - Create / edit / delete clients, designers, managers, affiliates - Activate / suspend accounts - Reset passwords

Subscription & Plan Control - Create new plans - Edit price, duration, credits, limits - Enable / disable plans - Assign custom plans to B2B clients - Manually adjust client credits

Designer Management - Add designers - Assign skills (graphic, video, web) - Availability & workload control - Performance monitoring

Request Control - Edit any request - Reassign designer - Change priority - Override SLA deadlines

Website Content Control - Approve client feedback for public display - Manage testimonials shown on webasia.in - Control featured work & portfolio

Financial Control - Manual & automated payouts - Refunds & adjustments - Affiliate commission approval

8. Messaging & Collaboration

- Real-time chat (Client ↔ Designer ↔ Manager)
 - Per-request message threads
 - File sharing in chat
 - Email sync for offline users
 - Read receipts
-

9. Technology Stack (Finalized – MERN)

Frontend

- React.js (Client, Designer, Admin)
- Tailwind CSS
- Redux Toolkit
- Socket.io (real-time)

Backend

- Node.js + Express.js
- JWT + Refresh Tokens
- REST APIs
- WebSocket Gateway

Database

- PostgreSQL (Primary)
- Redis (Cache, queues)

Storage

- AWS S3 / GCP Storage
- CDN (Cloudflare)

Payments

- Razorpay (India)
- Stripe (International)

Infrastructure

- Docker + Kubernetes
- CI/CD (GitHub Actions)

10. Database Design (Simplified)

users

- id, name, email, role, status

subscriptions

- id, user_id, plan_id, credits_left

requests

- id, client_id, service_type, status, priority

request_assignments

- request_id, designer_id, manager_id

files

- id, request_id, version, url

messages

- id, request_id, sender_id, message
-

11. Security & Compliance

Platform Security

- HTTPS + SSL/TLS
- Role-Based Access Control (RBAC)
- JWT + Refresh Token auth
- Secure admin-only endpoints
- Audit logs for admin actions

Data Protection

- Encrypted sensitive data (AES-256)
- Secure file uploads with scanning
- Isolated storage buckets
- Rate limiting & DDoS protection

Website + Platform Separation

- webasia.in (Public Website)
 - app.webasia.in (Secure CRM Platform)
 - Shared services but isolated access
 - Testimonials pulled only from **approved feedback**
-

12. Affiliate System (Enhanced)

Affiliate User Flow

1. Affiliate registers
2. Gets unique referral link
3. User visits via referral
4. System shows: " **!!** You were referred! Referral benefits applied"
5. Conversion tracked

Affiliate Dashboard

- Referral link generator
- Clicks, signups, conversions
- Earnings summary
- Payout request form

Payout System

- Affiliate submits payout request
- Provides:
 - UPI ID
 - Bank account
 - PayPal (optional)
- Admin reviews & approves
- Manual or automated payout

- Status: Pending → Approved → Paid

Commission Control (Admin)

- Percentage-based or fixed
 - Offer-based commissions
 - Time-limited referral bonuses
-

13. Client Feedback & Website Testimonials

Feedback Flow

- Client completes request
- Rates service (1–5 stars)
- Adds written feedback
- Chooses:
 - Private (internal only)
 - Public (website testimonial)

Admin Moderation

- Admin approves feedback
 - Approved feedback auto-published on webasia.in
 - Linked to service type & package
-

14. Website Revamp – Kimp.io-Level Landing Experience (NEW)

Objective

Revamp <https://webasia.in/> and [/requests](https://webasia.in/requests) pages to match the **conversion power, clarity, and modern SaaS feel of <https://www.kimp.io/>** while **retaining WebAsia brand colors, typography, and identity**.

The website will become a **high-conversion SaaS landing page**, not a traditional agency site.

Design Direction

- Modern SaaS layout
- Clean sections, large typography
- **3D illustrations & motion graphics** (subtle, premium)
- Smooth scroll animations
- High contrast CTAs

Visual Style

- Theme: WebAsia brand (same colors & fonts)
- UI Style: Kimp.io-inspired
- 3D Elements:

- Floating dashboards
 - Creative tools (pen, video, canvas)
 - Isometric cards
 - Animations:
 - Lottie / Three.js
 - Framer Motion
-

Landing Page Structure (Kimp-Style)

1. Hero Section

2. Headline: "Your Dedicated Creative Team – One Simple Subscription"
3. Subtext: Unlimited graphics, videos & web designs
4. Primary CTA: Get Started
5. Secondary CTA: View Plans
6. 3D animated dashboard preview

7. How It Works

8. Submit request → We design → You review → Done
9. Animated step cards

10. What You Get

11. Graphics
12. Videos
13. Social Media
14. Websites
15. Branding

16. Pricing Section

17. Startup / Standard / Business
18. Monthly & weekly toggle

19. Live Dashboard Preview

20. Animated CRM mock
21. Request flow demo

22. Why WebAsia

23. Indian pricing
24. Faster turnaround
25. Dedicated managers
26. Unlimited revisions

27. Testimonials

28. Pulled dynamically from CRM-approved feedback

29. FAQ (SaaS-style)

30. Final CTA

31. Start your subscription

/requests Page Revamp

- Replace static form with:
 - SaaS-style request flow
 - Smart service selector
 - Preview examples
 - Login/signup gating
-

Tech Stack for Website Revamp

- Frontend: Next.js
 - Styling: Tailwind CSS
 - Animation: Framer Motion, Lottie
 - 3D: Three.js / Spline
 - SEO: Next SEO
-

Conversion Goals

- Increase signup rate
 - Reduce bounce rate
 - Clearly explain subscription model
 - Push users to CRM onboarding
-

15. Final Outcome

WebAsia will visually and functionally: - Match Kimp.io quality - Feel like a global SaaS brand - Still retain WebAsia identity - Convert visitors into subscribers

16. Future Enhancements

- AI request assistant
- Auto design templates
- White-label for agencies
- Mobile apps

- API for enterprises
 - AI quality checks
-

13. Outcome

This enhanced system transforms **WebAsia** into: - A scalable SaaS platform - A Kimp.io-style creative subscription engine - A CRM-driven production workflow - A future-ready creative marketplace

This document is production-ready and implementation-aligned for MERN stack development.
